Quarterly Service Report

Summary. Requests grew steadily across both regions while latency stayed within the target. The table below lists the main indicators, and the formula defines the availability metric.

Region	Requests	p95 latency (ms)	Availability
Dhaka	1,204,330	182	99.95%
Chattogram	604,118	201	99.91%
Total	1,808,448	189	99.94%

Availability is defined as $A = (T - D) / T \times 100$, where T is the total minutes in the quarter and D is the number of minutes with failed health checks.

Regional notes

ঢাকা অঞ্চলে অনুরোধের সংখ্যা আগের প্রান্তিকের তুলনায় বারো শতাংশ বেড়েছে। চট্টগ্রামে নতুন সার্ভার যুক্ত হওয়ায় বিলম্ব কমেছে।

Capacity planning. The ingestion pipeline processed documents in batches of sixteen pages. Scanned pages were routed to the vision model, while digital pages used native text extraction. Average parsing time per complex page fell after the model upgrade.
